Results are based on nonempty rows and columns in each innermost subtable.

\*. The Chi-square statistic is significant at the .05 level.

- a. The Chi-square test is not performed for this subtable because row and column variables are identical.
- b. More than 20% of cells in this subtable have expected cell counts less than 5. Chi-square results may be invalid
- c. Some cell counts in this subtable are not integers. They were rounded to the nearest integer before the computa
- e. The minimum expected cell count in this subtable is less than one. Chi-square results may be invalid.
